Independent predictions from real events — weekend of 17–18 October 2026

Not copied from any prediction site. No bookmaker odds, no other site's xG and no other site's probabilities are used. Every number below is computed here from real events: goals scored and conceded in league matches this season, each league's goals-per-match average, and team news. Formula and all inputs are printed so anyone can re-run them.

Scope: 77 matches / 154 teams evaluated, including lower-division football (EFL Championship, League One, League Two, Serie B, Japan J1/J2/J3). Result: 3 over-2 pick(s) and 49 below-3 pick(s) pass the confidence bars (over 2 = P(team scores 3+) ≥ 55%; below 3 = P(team scores 0–2) ≥ 93%). Where this independent model disagrees with a copied baseline, the copied one is discarded. Rumours are shown as UNVERIFIED and change nothing unless a club confirms them. Analysis only, not betting advice.

OVER 2 — team to score 3+ goals (my own calculation)

Sources of facts (not predictions): league tables and season goal totals (BBC Sport tables for the Premier League and EFL Championship/League One/League Two, Wikipedia season pages including Serie B, J.League, SoccerStats), club statements (FC Bayern, Inter, Roma/Gasperini), and match previews reporting confirmed absences (ESPN, BBC Sport, Sports Mole, FotMob, ge.globo). Full inputs are in the JSON file named with this PDF (independent_inputs_expanded_2026-10-17_18.json for the 54-match set). Small samples early in the season make these estimates uncertain; treat probabilities as rough, not exact.
